TECHNICAL SKILLS & HOBBIES

Languages: Python, C++

Tools: Git, GitHub

Soft Skills: Problem solving, Adaptability, Communication, Attention to detail, Time Management, Situation handling

Relevant Coursework: Machine learning, Artificial Intelligence, Data Structures & Algorithms, Cloud Computing, Operating Systems, Data Analytics, Object Oriented Programming, Database and Management Systems.

Hobbies: Listening to music, Interested in sports

EDUCATION

Vel Tech Institute of Science and Technology

Chennai

Bachelor of Technology | CGPA: 8.0

2021 – 2025

Little Flower High School

Bapatla

Class X | Percentage: 92%

2019

PROJECTS

Bengaluru House Price Prediction | *Python, Scikit-Learn, Pandas, Matplotlib*

- Developed a machine learning model utilizing Multiple Linear Regression to accurately predict real estate prices in Bengaluru based on property features like location, square footage, BHK, and bathrooms.
- Performed extensive Exploratory Data Analysis (EDA) and data cleaning on the dataset, successfully handling missing values and removing extreme outliers using mean and standard deviation filtering.
- Applied dimensionality reduction techniques and one-hot encoding to effectively handle high-cardinality categorical variables, specifically grouping locations with sparse data points into unified categories.
- Evaluated the model using K-Fold cross-validation to ensure generalized performance, achieving a high R-squared score on the testing data split.
- Designed a streamlined prediction pipeline that processes raw user inputs through the trained regression model to output accurate, real-time price estimates.

University Admission Chance Predictor | *Python, Scikit-Learn, Seaborn, NumPy*

- Engineered a predictive machine learning system to estimate the probability of a student's admission into graduate programs based on academic metrics (GRE, TOEFL, CGPA) and profile strength (SOP, LOR, University Rating).
- Conducted comprehensive feature engineering and statistical correlation analysis using Seaborn heatmaps to identify the most significant predictors of graduate admission success.
- Experimented with and evaluated multiple regression algorithms, selecting the optimal model based on Mean Squared Error (MSE) and overall prediction accuracy.
- Built a structured backend pipeline to serve model predictions, allowing seamless evaluation of new applicant data against historical admission trends.
- Enabled prospective students to systematically gauge their admission chances and identify weak points in their academic profiles for targeted improvement.
